

Are you teaching BPM?

Discover the BPM Academic Initiative!

In university curricula Business Process Management gains increasing momentum, not only in information technology but also, for example, in business administration. Attending lectures suffices to learn concepts and modeling languages, yet students will master the subject only through exercise and practical work.

The BPM Academic Initiative offers teachers and students a platform — free of charge — where

- teachers **create** exercises from a comprehensive collection of assignments,
- students collaboratively **solve** these assignments in a professional modeling tool, and
- submitted solutions are **reviewed** and commented by the teacher.

Over 1000 students and teachers from universities world wide are using the platform already and have designed thousands of process models. Become part of the community, employ the initiative in your lectures, and benefit from the expertise of renowned BPM teaching and research institutions!

Start now at www.signavio.com/academic

comprehensive assignment collection

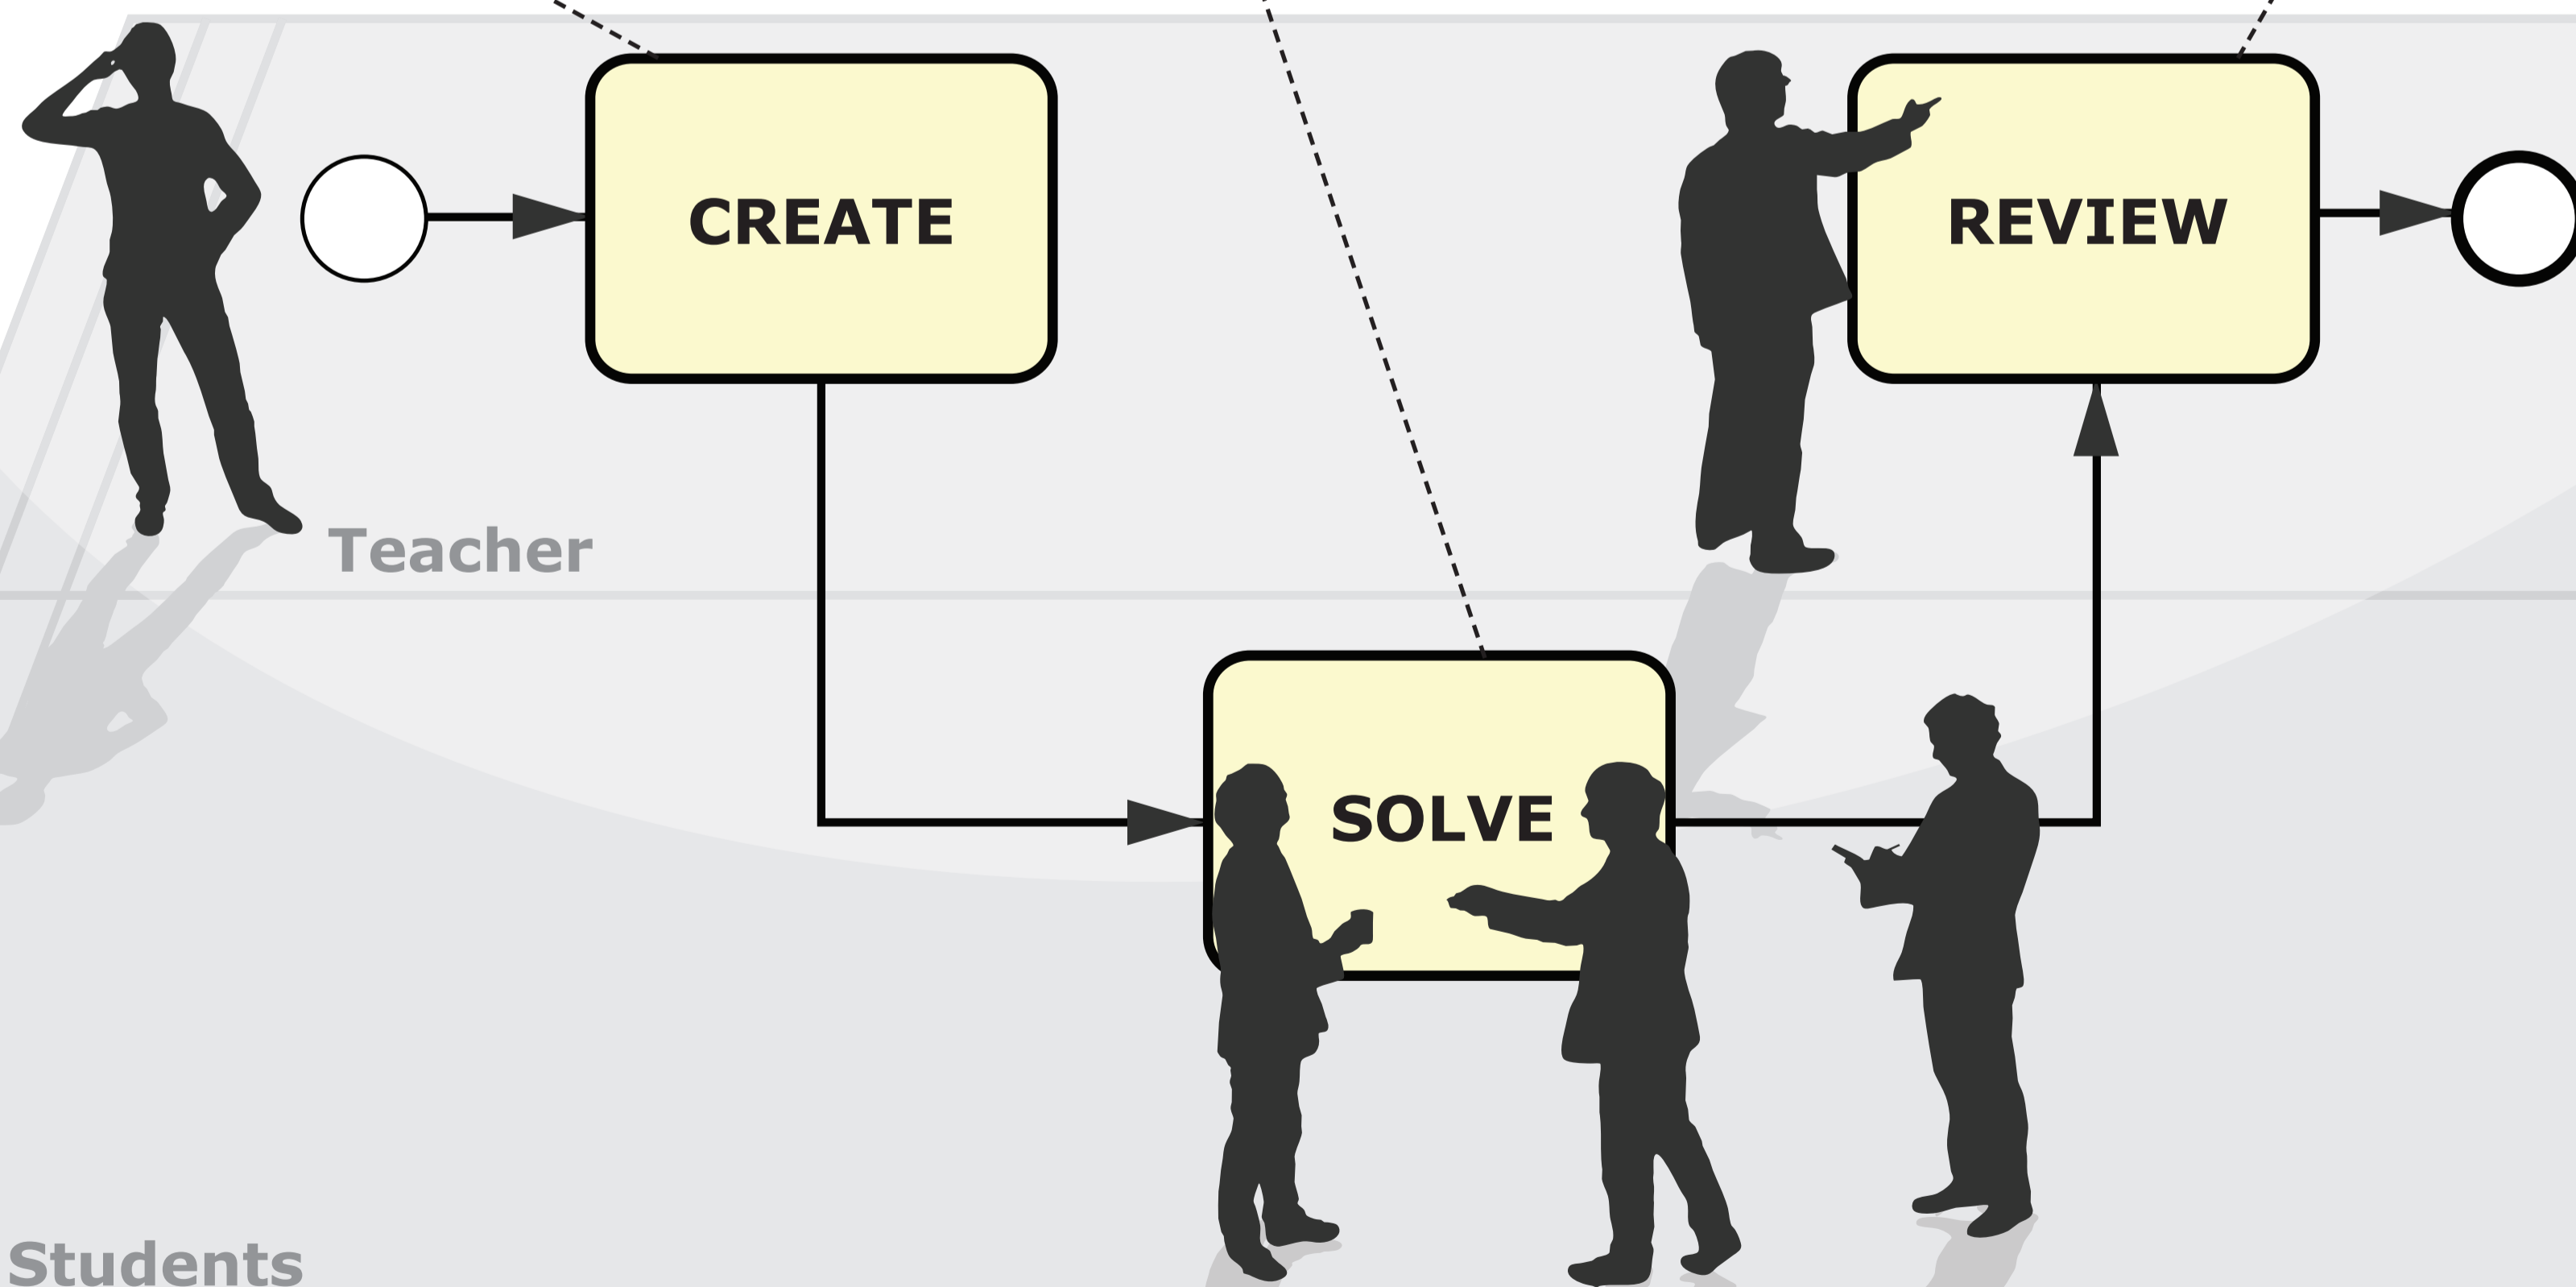

- choose from different exercise categories
- all content provided under Creative Commons
- Software as a Service, no setup time required

online process model editor

- no installation required, runs in a web-browser
